Art Unit: 1771

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-8, 15-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Steger et al, U.S. Patent No. 5,855,571. Steger discloses an absorbent material comprising nonwoven fibers which further comprises superabsorbent particles. At least some of the superabsorbent particles are coated with an impervious coating. The coated particles are subjected to treatment, (i.e., exposure to fluids), which causes the coating to degrade and become permeable. See col. 2, lines 28-65; col. 4, lines 1-9; col 5, line 51- col. 6, line 6. Since the exposure to fluids degrades the coating it acts only on a portion the first shape, i.e., the shape which comprises both the coating and superabsorbent particle, (claim 15).

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 9-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Steger et al, U.S. Patent No. 5,855,571 in view of Woodrum, U.S. Patent No. 6,056,854. Steger discloses an absorbent material comprising coated superabsorbent particles as set forth above. Steger differs from the claimed invention because Steger does not

Art Unit: 1771

disclose that the absorbent material is formed by a wet laid process. Woodrum teaches absorbent materials such as diapers, etc., which comprise superabsorbent particles may be formed by the wet laid process. See abstract. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have formed the absorbent materials of Steger by the wet laid process as taught by Woodrum. One of ordinary skill in the art would have been motivated to form the absorbent or Steger by the wet laid method because Woodrum teaches that this is a known and efficient means of forming an absorbent material which comprises superabsorbent particles.

5. Claims 12-14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
